

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

*XIX. An Account of some Productions of Nature in Scotland resembling the Giants-Causeway in Ireland: In a Letter to the Right Reverend Richard Lord Bishop of Offory, F. R. S. from Emanuel Mendez da Costa, F. R. S.*

*To the Right Reverend Richard (Pococke) Lord Bishop of Offory.*

My Lord, Mincing-Lane in Fenchurch-Street,  
March 5, 1761.

Read March 5, 1761. YOUR Lordship having communicated to the Royal Society, at their last meeting, an account of some rocks at the entrance of the harbour of Dunbar in Scotland, which are formed into pillars, like the growth of the famous Giants-causeway, but which are solid, and not joined like them, I take the liberty to send your Lordship the following account of a like natural production in other parts of Scotland, which was communicated to me by my ingenious friend Mr. Murdoch Mackenzie, who, by order of the Lords of the Admiralty, surveyed the coasts of that kingdom, and which came too late to be inserted in its proper place in my work.

In Cana island, which is four English miles long, to the southward of Skye, and near the island of Rum, the rocks, about a quarter of a mile above the harbour, rise into polygon pillars southward. About two miles from the west end of Cana, is a low rock,

or

or small island, where is a very regular pavement of hexagon stones, each about a foot deep, and about nine inches over. They form a smooth uniform pavement; and the sides of all the stones lie extremely contiguous, or close. Immediately below this upper pavement, lies another exactly like it. The pillars are jointed exactly like those of the Giants-caufeway, and are laid with their concavities downward, and their convexities upward; and their hollows are as much in proportion to these pillars, which are smaller, as they are in those of the Giants-caufeway. These places are about 200 miles northward distant from the Giants-caufeway.

If your Lordship chuses to communicate this account to the Royal Society, it is at your Lordship's pleasure.

I am,

With great respect,

My Lord,

Your Lordship's

Most devoted and

obliged humble servant,

Emanuel Mendez da Costa.
